

Designing for user experience

By: Anton Freudenthaler

Presentation outline:

- Intro & Goal
 - Design process
 - The final design:
 - An art Exhibition
 - Reflections
-

Intro & Goal

Intro & Goal

- To make a spatio-temporal design
 - Physical place or space matters
 - Time or temporal structures are relevant
- To evoke a distinct user experience
 - Create the notion of discovery
 - Discover something about oneself and others.
- To enrich an already existing user experience
 - Avoid disturbing the ongoing journey
 - Enriching the existing emotions

Design process

**Record people at places &
let others that visit the place
listen.**

Record people

Where?

Museums, Parks and Taxis more suiting than
Restaurants, Shops or Bus Stops

Why?

To hear other opinions, for fun, to learn something, to
experience something through sounds

Experience?

Captivation, Discovery, Exploration, Expression, Fantasy,
Humor

Record people

Art museum

Discovery

Discovery

It is a journey with few interfaces, roles and transitions.
Open spaces, people, specific art at specific spots.

Learn something new. Find forgotten things. Unravel things. Try something new. Discover something about oneself, others or the world.

“when products perform an action in a surprising way, such as a toaster that burns a figure on a slice of bread”

Record people

More dynamic

Here-once vs Here-recurring, different reflective questions & answers could make the visit more dynamic.

Create a story

Temporality, creating something that you can keep and share extends the journey beyond your visit

Discovery

Hearing what others have said about the art. Figuring out what you think yourself.

User scenario

Q:

Q:

Hello Sarah!
Which day of
the week does
this painting
remind you of
the most?

Definitely
sunday!

Does this
painting remind
you of a particular
season, Sarah?

It reminds me
of winter.

Thank you!
Some people
were reminded
of autumn
as well.

YOUR STORY

It was a
sunday in
1992. It was
winter and
it was really
raining.

Study of artists

Final design

An art exhibition

- **Your own experience**

Welcome!

This is an art exhibition where
you get to reflect about what a
piece of art is to you.

Sören Brynielsson

Close to a piece of art you can use the controller.

Hi Sarah, do you like this picture?
What is it that you like, don't like,
about it?

Sören Brynielsson

The blue button will ask you a question about the picture.

I like all the blue colors,
they are nice. I like how
its nature, but still not.
Like a fantasy place!

Sören Brynielsson

The red button lets you record your answer.

How interesting! Do you want another question or maybe you want to hear an answer from another person?

Sören Brynielsson

There are more than one question available.

Sören Brynielsson

You can listen to what others have answered.

Silvia Pelissero

Many of the questions are reused for different pictures.

What about this picture Sarah,
what do you think the artist
thought when she made this?

Silvia Pelissero

But which you get first is chosen randomly.

Maybe she wanted
to express sadness
with colors...

Silvia Pelissero

A microphone in the controller becomes quite handy!

I find this painting very hectic. I can't really explain why, maybe it's just too much for me...

Vasilij Kandinskij

You can walk around and listen to what others have said.

Hi again Sarah, why do you think there's a rabbit in this picture?

Sus Lyckvi

There are some questions that are picture-specific.

Review wall

In the end you will find a lot of movie clips on a wall.

Review wall

The clips are summaries of visits made by other people.

You will get one aswell!

The summary clip contains the
pictures you've shared your
thoughts about.

A kept experience
